What is the Addressed Problem

1 Introduction

- We would like to learn the Occupancy values of points inside a bounding box
- We learn the features and the dynamic planes
- During Inference we reconstruct meshes with Multiresolution IsoSurface Extraction

2 Dataset

- Introduction
- **▶** Dataset
- ▶ Architecture
- Reconstruction
- Results
- Improvements

This Dataset is composed by high-resolution **human scans** of 10 different bodies in 30 different poses.

- Each samples inside the training set is composed by the scan and the registration, while we have only the scan for the test set.
- The test set is composed by 200 scans, while the training has 100 scans.
- About 80 % fo the initial training set has been used for training, while the other 20 % has been used for validation.

Starting from the meshes given by the Dataset, some pre-processing is needed:

- We need to randomly sample 3000 points from the mesh surface and add a perturbation (Gaussian noise) to them.
- We need to randomly sample 2048 points from the bounding box that contains the original mesh.

These noisy clouds are then used to learn the features and the geometry of the object through the Encoder, while the other points are used in the decoding part of the network.

Data Augmentation

2 Dataset

Here is some introductory text explaining the data augmentation process. This text spans the full width of the frame.

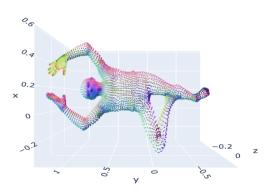

Figure: Registration cloud

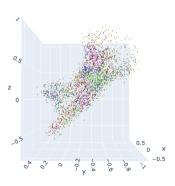

Figure: Augmented cloud

Label Generation² Dataset

For each Sampled Cloud, labels have been generated with the following procedure:

- Measure the distance between the original mesh and the sampled points
- If the distance is positive then the point are inside the mesh
- If the distance is 0 the points are on the surface
- If the distance is negative outside a small threshold I am considering them outside

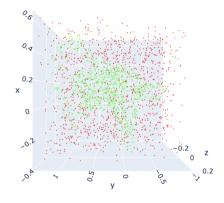

Figure: Example of the Sampled cloud, where with green we represent occupied points and with red the unoccupied ones

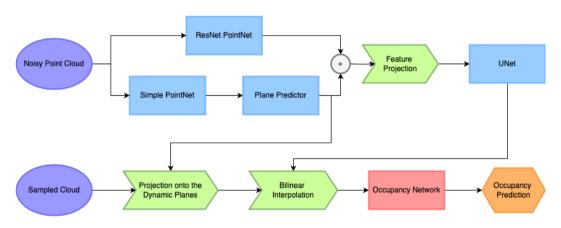

3 Architecture

Architecture design

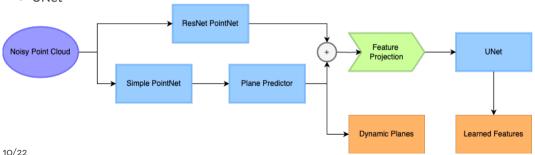

3 Architecture

The Encoding part takes in input the Noisy Cloud and it's composed by the following steps:

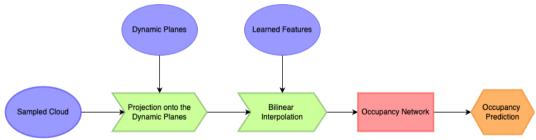

- ResNet PointNet
- Simple PointNet + Plane Predictor
- Feature summation + projection
- UNet

The Decoding part is composed by:

- Feature Projection and Bilinear Interpolation
- Occupancy Network

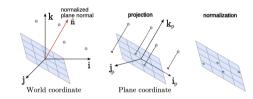

Projection Operation

3 Architecture

Both the Encoder and the Decoder have a projection operation involving the features and the **Dynamic Planes**.

- Change of Basis
- Orthographic Projection
- Normalization

$$\mathbf{R} = \mathbb{I} + [\mathbf{v}]_{\times} + [\mathbf{v}]_{\times}^{2} \frac{1 - k \cdot \hat{\mathbf{n}}}{||\mathbf{v}||^{2}}$$
 (1)

Where $v = k \times \hat{\mathbf{n}}$ and $[v]_{\times}$ it's the skew symmetric matrix of the vector $v \in \mathbb{R}^3$.

Bilinear Interpolation 3 Architecture

• Definition:

 Bilinear interpolation is a resampling technique used to estimate new pixel values on a 2D grid.

Concept:

- It computes the output value as a weighted average of the four nearest pixel values.
- The interpolation is performed first in one direction (e.g., horizontal) and then in the other (vertical).

Multiresolution IsoSurface Extraction (MISE)

4 Reconstruction

- Create a grid over all the bounding box
- Evaluate the occupancy of each corner of the voxels
- Define the Active voxels as the one composed with at least one occupied corner and one not
- Subdivide each Active voxels into 8 subvoxels (2x2x2 grid) and evaluate the new points occupancy
- Repeat until the desired resolution is obtained

In order to evaluate the performance of our model, the following metrics have been used:

• Chamfer Distance : $CD(A R) = \frac{1}{2} \sum_{n=1}^{\infty} \min_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{2} \sum_{n=1}^{\infty} \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{2} + \frac{1}{n} \left[\frac{1}{n} - \frac{1}{n} \right]^{$

$$CD(A, B) = \frac{1}{|A|} \sum_{a \in A} \min_{b \in B} \|a - b\|_2^2 + \frac{1}{|B|} \sum_{b \in B} \min_{a \in A} \|b - a\|_2^2$$

• IOU :
$$IoU(A', B') = \frac{|A' \cap B'|}{|A' \cup B'|}$$

• F-Score:

Add each formula
